VESTANAT® is a registered trademark of Evonik Industries or one of its subsidiaries. This information and all further technical advice are based on our present knowledge and experience. However, it implies no liability or other legal responsibility on our part, including with regard to existing third party intellectual property rights, especially patent rights. In particular, no warranty, whether express or implied, or guarantee of product properties in the legal sense is intended or implied. We reserve the right to make any changes according to technological progress or further developments. The customer is not released from the obligation to conduct careful inspection and testing of incoming goods. Performance of the product described herein should be verified by testing, which should be carried out by qualified experts in the sole responsibility of a customer. Reference to trade names used by other companies is neither a recommendation, nor does it imply that similar products could not be used.
With its highly specialized product portfolio and broad expertise in crosslinker technology, Evonik is a major and essential provider of new solutions for liquid coating systems. Our strong competitive position is based on integrated technology platforms, innovation power and close cooperation with our customers.

Benefits at a glance
- Versatile product range
- Excellence in quality
- Securing reliability for coating formulations
- Global technical service and R&D

VESTANAT® products are a natural fit for high performance PUR coatings.

About us
For more than 50 years Evonik’s Business Line Crosslinkers has been the reliable partner and solution provider in the field of isophorone chemistry. With global production sites, we are uniquely placed to satisfy our customers’ demands. Our portfolio of VESTA products showcases high performance materials that enhance the quality of our customers’ applications.

VESTA – Developed in Germany. Available globally.
Crosslinking makes the difference...

In a well-linked network, by connecting many individuals, a continuously stable performance can be assured and often even the positive extra can be achieved. The idea of crosslinking can be applied in the field of coating systems. Single molecules have the potential to perform outstandingly, but crosslinked molecules surpass the level of superior performance.

VESTANAT® Crosslinkers for high-performance PUR coatings

VESTANAT® crosslinkers focus on aliphatic polyisocyanate crosslinkers that are light-stable. They are based on e.g. IPDI isocyanurate trimer, for the formulation of one- (1K) and two component (2K) polyurethane systems.

Non-crosslinked coatings
Without crosslinking, a coating will be easily influenced by environmental impacts and will consequently lead to the damaging of the substrate.

Crosslinked coatings
Crosslinkers increase the stability of the coating and improve the resistance towards environmental impacts.

Polyisocyanate crosslinkers in 2K systems
- Combination with a resin component right before application
- Reaction starts immediately after mixing the polyisocyanate with the resin component
- Reaction leads to a 3D network with a high durability

Blocked polyurethane crosslinkers in thermosetting 1K systems
- Contains blocking agents e.g. \(-\text{caprolactam}\)
- At ambient temperature: blocked polyurethane crosslinkers cannot react with the resin component
- At elevated temperatures: the blocking agent will be released and the isocyanate group can react with the resin

Based on a broad isophorone technology platform Evonik offers VESTANAT® crosslinking solutions that ensure the excellence of coatings.

These crosslinkers come along with ready-to-react isocyanate groups which can link with isocyanate reactive functionalities e.g. hydroxyl groups. To address the challenges of today and tomorrow we offer high performance crosslinkers for the use in high-end applications.
Applications

Agriculture & Maintenance

Automotive OEM & Car Refinish

VESTANAT® polyisocyanate crosslinkers for the formulation of highly weather- and chemical resistant PUR coatings. VESTANAT® T 1890 imparts faster dry times, which result into remarkably short curing cycles even at ambient temperatures.

VESTANAT® HB / VESTANAT® HT products are used for weather-resistant and light-stable, solvent-borne 2K PUR coatings that can be used in multifarious applications. These products are complementing Evonik Crosslinkers hardener portfolio for coating solutions.

Selection of solutions

VESTANAT® T 1890
Is a cycloaliphatic polyisocyanate crosslinker with a high compatibility. The crosslinker is used for light-stable and weather-resistant 2K PUR systems with improved physical drying properties and chemical resistance.

VESTANAT® B 1358 A
Is a blocked cycloaliphatic polyurethane crosslinker for the use e.g. in 1K automotive OEM primers generating excellent intercoat adhesion. It is characterized by an excellent balance of reactivity and storage stability.

VESTANAT® HB 2640/LV
VESTANAT® HT 2500/LV
Are aliphatic polyisocyanate crosslinkers based on hexamethylenediisocyanate for achieving weather resistance and light fastness. Blends of VESTANAT® HB 2640/LV or VESTANAT® HT 2500/LV combined with VESTANAT® T 1890 in 2K PUR paints improve drying performance, surface hardness, pot life and chemical resistance against environmental impacts.

Benefits

• Durability against environmental impacts
• High reactivity even at ambient temperature
• First-class chemical resistance
• Short curing cycles
• Excellent compatibility
• High reactivity

Can-& Coil Coating

Blocked VESTANAT® polyurethane crosslinkers offer solutions for interior as well as exterior coating applications within the can & coil coating industry. Highly flexible coatings with superior durability are easy to obtain, ensuring prime protection.

Selection of solutions

VESTANAT® B 1186 A
Is a cycloaliphatic blocked polyurethane crosslinker for interior BPA-NI* can coatings. According to FCN No. 1268, VESTANAT® B 1186 A is eligible for food contact applications. Please refer to FCN. No. 1268 or get directly in touch with us for further details.

* BPA-NI = Bisphenol A – not intentionally added

VESTANAT® B 1358 A
Is a cycloaliphatic blocked polyurethane crosslinker to be used for exterior can coatings.

VESTANAT® EP-B 1481 ND
Is a cycloaliphatic blocked polyurethane crosslinker to be used for coil coating formulations due to a low tendency to yellow during curing process.

Benefits

• All can & coil coating applications can be served (food /non-food)
• 1K storage-stable approaches
• Improved sterilization resistance
• High flexibility

Decorative & Industrial

Unique VESTANAT® DS grades are sophisticated blocked waterborne crosslinkers. These products are available either for anionic or cationic 1K formulations for e.g. glass, metal or textile coatings.

Selection of solutions

VESTANAT® EP-DS 1205 E
Is a blocked polyurethane crosslinker based on cycloaliphatic VESTANAT® IPDI emulsified in water without any auxiliary solvents for combinations with anionic or nonionic waterborne OH-terminated resin dispersions.

VESTANAT® EP-DS 1076
Is a waterborne cationic, 2-acetoneoxime blocked isocyanate crosslinker for combinations with cationic or nonionic stabilized waterborne hydroxylated resins. It can be used solely as a crosslinker or in combination with melamine resins.

Benefits

• Light stability
• Co-solvent-free
Crosslinker specialties adjust your coating systems according to your individual needs and add a unique touch to your formulation.

Our versatile spectrum of specialty products complement your specific application requirements. Please contact us to elaborate on your tailor-made solution.

Selection of solutions

VESTANAT® T 1890/100
Is a solvent-free cycloaliphatic polyisocyanate crosslinker which can be used in 2K PUR systems e.g. for the manufacture of PUR resins or blocked polyisocyanates. Its broad solubility in all types of non-protic solvents gives our customers the chance to chose a solvent which fits best to the coating application.

VESTANAT® B 1358/100
Is a solvent-free blocked cycloaliphatic polyisocyanate crosslinker which can be used in 1K PUR stoving systems. The solvent-free delivery form offers a great choice of possible solvents to be used with the benefit of the optimization of many paint formulations.

VESTANAT® EP-B 1358 DINP
Is a cycloaliphatic blocked polyurethane crosslinker component supplied as a solution in dioxyenylphthalate for the combination with plastisols and organosols. It is specially developed e.g. for under-the-body coatings leading to a solid and resistant result.

VESTANAT® EP-B 1581
Is a cycloaliphatic blocked polyurethane crosslinker displaying high flexibility and low temperature cure.

VESTAMIN® A 139
Is a liquid blocked crosslinker for polyisocyanate resins based on a cycloaliphatic diamine. The product exhibits a very low reactivity towards isocyanate groups. The fast crosslinking with polyisocyanate resins occurs under the influence of moisture by releasing the original diamine.

OXYESTER® EP-HS 2272
Is a linear polyester diol, developed primarily for the use in aliphatic PUR technology, especially as a VOC-reducing co-polyol in 2K PUR high solid coatings.

OXYESTER® T 1136
Is a linear saturated polyester diol. It is mainly applied as a flexibilizing polyol in 2K PUR high solid paints or 1K stoving systems.

Benefits

• Plug-in tools for the enhancement of your coating formulation
• Faster curing cycles
• Lower VOC contents
• Higher flexibility momentum

Extract of crosslinker specialties application fields:

• OEM applications
• Maintenance
• Industrial
• Wood
• Plastic coatings

Evonik’s Business Line Crosslinkers is your perfect partner for innovative product developments and tailor-made solutions!
One partner. Many experts.

Evonik for coatings
The coatings industry is one of the most important growth markets for Evonik.
Integrated solutions become more important than simply deliveries of raw materials. The company is rising to this exciting challenge with an industry team for coatings that is active worldwide in order to reach the customers wherever they are and to understand their specific needs.

Evonik’s Paints & Coatings Industry Team consisting of:
• Acrylic Monomers
• Adhesive Resins
• Coatings Additives
• Coating Resins
• Crosslinkers
• Functional Silanes
• Silica

Evonik brands for coatings
ACEMATT® NANOPOX® SILIKOTOP®
AEROSIL® NANOCRYL® SIPERNAT®
ALBIDUR® NANOPOL® TEGO®
ALBIFLEX® POLYVEST® VESTAGON®
DEGADUR® PROTECTOSIL® VESTAMIN®
DEGALAN® SILIKOFFTAL® VESTANAT®
DEGAROUTE® SILIKOPHEN® VESTOPLAST®
DYNAPOL® SILIKOPON® VESTOWAX®
DYNASYLAN® SILIKOPUR® VISIOMER®

Competence network for coating solutions
Evonik works closely together with strategic partners. The employees look at the long-term requirements of the end customers and develop new technologies and products. These strategic partnerships are the key to future profitable growth and the continuous development of Evonik’s competences for the coatings market. However, sustainable growth is possible only on the basis of intensive cooperation with the customers.
